

SARA delivers Mass Notification to alert students and faculty across Schools and Campuses

Get real-time confidence through innovative alert solutions...
because RIGHT NOW matters most

Overview

Education

Delivered by SARA

The Situational Awareness and Response Assistant (SARA) is an automated alerting system and awareness engine that sends voice and text alerts via phone, pager, email, etc. SARA provides a wireless sensor network, integration tools (to existing systems and devices) and broadcast communication in a single solution.

This rich set of capabilities resides on a single technology platform, allowing your school or college campus to utilize one system to turn all of your alarms into managed alerts:

- One powerful alerting system
- The unique Voice of SARA
- Accurate location via SARA's Positioning System (SPS)
- Integration to current systems
- Safety and activity alerts
- Remote uptime supervision and disaster recovery

Schools and campuses across the country are faced with the challenge of keeping their students and teachers safe, while maintaining an environment that promotes learning and social growth. SARA allows you to increase your awareness of all situations — both emergency and non-emergency.

Increasing Safety and Security via The Voice of SARA

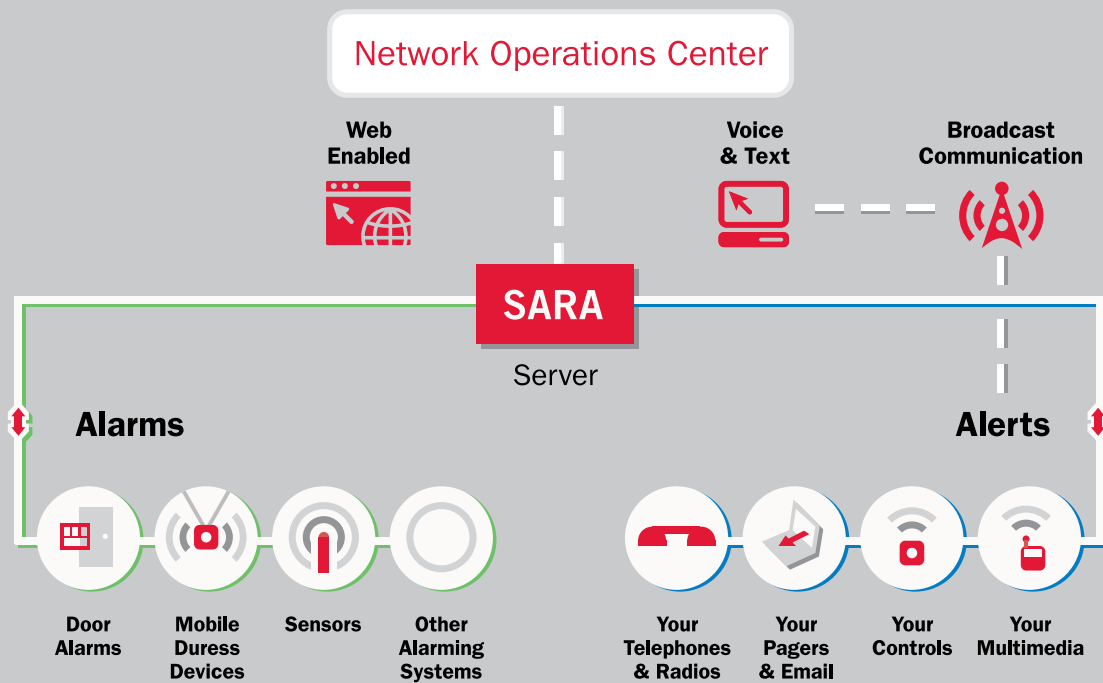

Through a simple to use text to voice engine, SARA can send voice and text alerts to pagers, email and telephones, as well as to cell phones, home phones and external email. This allows both students and faculty to be notified of important events at any time, any place. Staff members can quickly address safety and security concerns or environmental problems

before they turn into emergencies. Likewise, students and faculty members can hear the unique voice of SARA and be alerted of emergency situations or reminded of community activities and events via their phone.

When a fixed or wireless panic button is activated or a monitored door or window is opened in a classroom, in a dorm room, in the parking lot, in an administrator's office, on the playground or in a restroom, then a voice or text alert will be sent directly to the principal or other pre-defined security locations such as campus or local police. The emergency event triggers an alert that is sent directly to the proper location and individual for an immediate response.

Providing Accurate Location Information

SARA's innovative Positioning System (SPS) provides enhanced location support for mobile devices within the EchoStream RF Infrastructure. Through vector mapping technology, SARA provides highly accurate location data which shows the proximity of the mobile device to a fixed device within the infrastructure. Points of interest can be defined anywhere on your campus, in order to provide multiple points of data to more quickly and easily find those in need of help. The location provided by SARA via SPS can be as accurate as to the apartment level.

Improving Mass Notification

SARA's broadcast communication capability allows students and staff across large campuses to be notified of emergency situations quickly and easily. Information like security warnings and inclement weather alerts can be sent via email, pagers, two-way radios, text to mobile phones, etc.

Remote Supervision and Back Up

You can be assured that your system will always be up and running with remote system supervision and backup being provided by Status Solutions. The three levels of supervision include system level, integration level and

device level. As new updates are made available, upgrades can be made to your software remotely. In the event that a disaster occurs, Status Solutions will be able to perform a remote recovery to help retrieve and restore your valuable information.

This wireless solution is designed to be administered and maintained by community personnel, and has the flexibility to easily adapt to changes in the environment without affecting the system. Existing staff are able to maintain a simple and intuitive web-based system.

Schools of the Future

Wireless technology affords the luxury of rapid and cost effective deployment. Therefore a wireless bubble can be placed throughout an entire school district or college campus enabling the schools and associated buildings, to deploy additional sensors and cameras at any time. Additional sensors and devices include cigarette busters, water sensors, temperature monitors, motion and smoke detectors. As the situational awareness needs of your school or school system evolves, changes and enhancements to the existing technology environment can be quickly and easily made through SARA, a RF, IP and telephony enabled solution.
